Barnard's Florists' Price List —SPRING 1929—

We make every effort to supply Flower Seeds of special merit for Florists' use; many strains of distinction are grown and introduced by individual enthusiasts the world over and our many years of dealing in Seeds enables us to get in touch with these Flower Seed Specialists; while the price may appear higher than seed sold in general, these selected strains will produce stock that Florists will find much more profitable to grow.

All Flower Seeds are delivered postpaid to any postoffice in the United States

SEEDS OF SPECIAL MERIT

For the convenience of Florists who are in doubt as to the better varieties of Flower Seeds to sow, we have devoted a few pages to a selection of specialties which are used by our most progressive customers; together with a descriptive list of the newer introductions of merit.

See pages from 5 to 16 for a complete list of Flower Seeds

ALYSSUM

Little Gem, Barnard's Selected Strain

Alyssum is not a very important item to Florists but we frequently see a batch of small pot plants of more or less loose habit and showing too much green.

Barnard's Selected—Little Gem is very compact and starts to bloom when small, a bunch of it looks like a "white streak" compared with the ordinary strains.

T. pkt., 15c; oz., 75c; ¼ lb., \$2.00

Note—Many Florists sell the popular kinds of Flower Seeds, such as Alyssum, Candytuft, Nasturtium, Zinnia, etc., in their stores; we will be pleased to quote quantity price to those who send a list of varieties and quantities desired.

LARKSPUR (Annual Varieties)

La FRANCE. The best pink stocked-flowered Larkspur for Florists' use. The large, well formed double flowers are a very pleasing shade of Salmon-pink—closely resembling the popular Snapdragon Jeanie Schneider, and are well placed upon the long stems. Is much more vigorous and taller growing than other pink shades of stock-flowered varieties on the market today, and is more resistant to mildew.

Spencer Varieties

"BUTTERFLY" or "ORCHID FLOWERED"

This type of Sweet Peas has very largely taken the place of the common or grandiflora sorts. The flowers are larger, often measuring 2½ inches across. Their beautiful waved petals are borne in clusters of 3 or 4 on long, strong stems, adding so much to their value as cut-flowers. The varieties that we are listing here are those which we consider the best of their color, and include some of the very recent introductions of special merit.

FUMETOBAC. Is an improved 2% high-nicotine fumigating tobacco powder. Easy to burn and makes strong nicotine fumes which are deadly to insects without harming the plants or blooms.

Fumetobac burns steadily and fairly rapidly but not so fast that the nicotine is destroyed before it has given off its full insecticidal value; this is an important advantage and one reason why it is so economical, there is plenty of time to leave the house before the fumes are uncomfortable to the men.

Simply burn a 4-inch flowerpot full for every 10,000 cubic feet. Gives safe and sure Greenhouse fumigation at lowest cost.
